

WINTER

SPRING

SUMMER

FALL

WINTER is when we set your landscaping on the path to looking great for **SPRING**

The next few weeks will find us busy at your property performing quite a few simple but critical tasks necessary to set your landscape on the right path to feeling healthy and looking fantastic by the first days of Spring.

Pruning & Mulching

Many shrubs and bushes require hard pruning, or removing most of the foliage. Line and Paragraph Spacing in the months to come. We hard prune by hand- never with a machine- to avoid Unnecessary plant damage. Mulching helps soil retain moisture And provides needed nutrients.

Weed Control

Weed seeds are in the ground, waiting to germinate after the winter rains. Applying pre-emergent herbicide stops weeds before they sprout, keeping planters, hillsides and other areas weed-free. Treatment must be done now for maximum effectiveness.

Tree care

We remove unnecessary stakes from healthy trees mature enough to stand on their own. Skirting, or removing low hanging branches, improves air circulation through the canopy. It also prevents pests infestation by removing branches that touch the ground and allow insects into the tree.

Special Maintenance

Our crews inspect v-ditches and drains and remove any debris that could cause a blockage. Like the rain gutters on a house, drainage systems must be regularly maintained to ensure they are effectively removing runoff. Neglecting these tasks can lead to damaging erosion, or even flooding.

Start the new year of landscape maintenance on the right path by calling New Image today.
